***Appendix D***  
***Dredge Sediment Sampling and Testing***

### **III. TEST ADMINISTRATION**

#### **A. Sponsor**

French and Parrello Associates  
1800 Route 34, Suite 101  
Wall, NJ 07719

#### **B. Testing Facilities**

Aqua Survey, Inc. (ASI)  
469 Point Breeze Road  
Flemington, NJ 08822

CHEMTECH Environmental Laboratory  
284 Sheffield Street  
Mountainside, NJ 07092

Enthalpy Analytical  
2714 Exchange Drive  
Wilmington, NC 28405

#### **C. Dates of Experimentation**

Date of Study Initiation: March 29, 2019  
Date of Study Completion: May 28, 2019

#### **D. Study Participants**

Jon Doi, Ph.D.	Executive Vice President
Thomas Dolce	Field Operations Manager
Robert Fristrom	Field Operations Specialist
Cheryl Hall	Quality Assurance Officer
Liz Horn	Staff Scientist
Erik Knudsen	Field Operations Support
Kevin Sondag	Field Operations Specialist
Michelle Thomas	Laboratory Manager

## **IV. MATERIALS AND METHODS**

All sampling and testing were performed in accordance with the technical manual “The Management and Regulation of Dredging Activities and Dredged Material in New Jersey’s Tidal Waters” (NJDEP Dredging Manual), October 1997, and a New Jersey Dredging Projects SSAP approved by NJDEP on March 15, 2019.

### **A. Sampling**

Test sediments from 15 locations, site water, and a field blank were collected by Aqua Survey personnel from South Amboy Ferry Terminal, South Amboy, NJ, on March 29, and April 1, 2019. The vessel used for sampling, the R/V Schuylkill, was positioned using a Trimble NT200D Differential Global Positioning System (DGPS). Sediment collection was performed using a Rossfelder P-3 vibracore with flexible plastic core liners. The project depth was -14.0 feet, including 2 foot overdredge.

The core samples collected were inspected and photographed. Characteristics were recorded on Sediment Core Logs. All samples were assigned unique ASI sample numbers. These samples were received on ice under chain of custody and were stored at 2-4 °C.

See Figure 1 for site map and Table 1 for DGPS coordinates.

The appendices contain all supporting documentation including sediment core logs (Appendix A), photographs (Appendix B), chains of custody (Appendix C), sample use forms (Appendix D), grain size distribution and percent moisture (Appendix E), and TOC raw data (Appendix F).

### **B. Homogenizing and Compositing**

Each of the core samples was carefully homogenized using a stainless steel mixer. This procedure followed the specific guidelines found on pages 9-11 and in Appendix A of the Dredging Manual and in ASI’s standard operating procedure SOP/PRP/008. Samples were mixed until uniform in color and texture. Two composites were formed from the core samples. All sample identification numbers can be found in Table 2.

Since it is proposed that some of the dredged material may be treated with stabilizing materials, which will alter its chemical and physical composition, aliquots of the composite samples were treated in a manner to simulate this stabilization process. A standard commercial brand of Portland cement was used in creating the amended composite samples. Aliquots of the composites were blended with Portland cement (8% by weight) for approximately 5 minutes using a power drill and mixing paddle. Sub-samples of these composites were reserved for the appropriate chemical and physical analyses.

Sub-samples of each of the samples, both individual cores and the composites, were reserved for the appropriate physical and chemical analyses.

### C. Physical and Total Organic Carbon Analysis

Guidance followed for percent moisture and grain size analysis was the *Standard Test Method for Particle-Size Analysis of Soils*, Designation ASTM D422-63, reapproved 2007. See Appendix E for the grain size distribution and percent moisture raw data.

Total Organic Carbon (TOC) was also determined based on the guidance from EPA Office of Solids Waste and Emergency Response SW-846 Method No. 9060 (Volume IC, Chapter 5, Revision 0, 9/86). The instrument for this analysis was the Dohrmann TOC Boat Sampler, Model 183 (Serial number 98202003), which was connected to the Dohrmann Apollo 9000 TOC Analyzer. Raw data and a standard reference material control chart can be found in Appendix F.

### D. Chemical Analyses

Sub-samples of the composites, modified elutriates, site water and the field blank were shipped to the analytical laboratories by overnight courier. Following chain-of-custody procedures, the samples were placed in jars and shipped in coolers with ice packs.

CHEMTECH Environmental Laboratory performed the chemical analysis of the sediment, site water, modified elutriate, SPLP, and field blank for all required parameters. The CHEMTECH results are reported in tables in this volume. The full CHEMTECH results, including CHEMTECH Quality Assurance data, can be found in Volume II.

Enthalpy Analytical Services performed the Dioxin/Furan analysis of the sediment, site water, modified elutriate, SPLP, and field blank. The Enthalpy dioxin/Furan results are reported in tables in this volume, and the full results including Enthalpy Quality Assurance data, can be found in Volume III.

## **V. PHYSICAL AND CHEMICAL ANALYSIS RESULTS**

The results of the analyses are as follows:

- Table 3: Physical Analyses (Grain Size Distribution, Percent Moisture and TOC)
- Tables 4a-e: Bulk Sediment, NJDEP Residential and Non-Residential SRS
- Tables 5a-e: Bulk Sediment Dioxins/Furans, NJDEP SRS
- Tables 6a-b: SPLP Leachates, NJDEP Class II Groundwater
- Tables 7a-b: SPLP Leachates Dioxins/Furans, NJDEP Class II Groundwater
- Tables 8a-e: Modified Elutriates, NJDEP Surface Water, Acute
- Tables 9a-e: Modified Elutriates, NJDEP Surface Water, Chronic
- Tables 10a-e: Modified Elutriates Dioxins/Furans, NJDEP Surface Water, WHO TEFs/TEQ
- Table 11: Site Water and Field Blank
